

V-Mate Firmware Release History

Version	Date	Region	Remarks
01.09.en	October 2006	NA, UK, ANZ	English only (User Interface)
01.13.en	October 2006	NA, UK, ANZ	English only & bug fixes
02.03.ww	November 2006	Worldwide	Multi-language & bug fixes
02.07.ww.b4	July 2007	Worldwide	New & improved functionality & bug fixes
02.07.ww.b8	August 2007	Worldwide	Improved functionality & bug fixes

Firmware version 02.07.ww.b4 updates from version 02.03.ww

Type	Item	Description	Benefit
New Feature	Recording duration option	Set the duration of a manual recording (in hours & minutes)	No need to be present when the TV program/movie is finished. V-Mate will stop the recording automatically.
New Feature	Recording Format Code option	Enter a phone specific code and V-Mate will adjust the video format settings accordingly	Immediate support for new phones. No need to wait for/install new firmware.
New Feature	Scheduled recording activation	Option to turn scheduled recordings on and off	Temporarily (de)activate a scheduled recording without the need for deleting/entering all details (channel, date, start/stop times and frequency settings are preserved)
Improved Functionality	Video quality	Improved for TV/PC setting (640x480 resolution)	Sharper and smoother running video
Improved Functionality	Phone List	Over 100 phones have been added	More easy to set the video settings for your phone
Improved Functionality	Portable Video Player Category	New category added with generic PVP recording format profile	Record for playback on most PVPs including iPod Video
Improved Functionality	IR Emitter Set Up	After selecting the video source box type and brand in the user interface, V-Mate will setup the IR connection automatically	No longer necessary to look up and try different IR codes
Improved Functionality	Preview window	Size increased to cover about 3/4 of the screen	Better viewing experience and more easy to read and select DVD menu items
Improved Functionality	Remote control response time	V-Mate responds quicker and better	No need to press buttons twice
Improved Functionality	LED behavior	Blue (card slot) LED is blinking during recording, red (recording) LED is blinking fast when card is full	Device status more clear when TV is off
Bug Fixes	Various	Various	Various
